Symposium 2: Optimal preoperative biliary drainage for malignant biliary obstruction in HBP surgery

February 23 (Tue.) 16:40-18:40 [Room 4]

SY2-1 Optimal preoperative biliary drainage for malignant biliary obstruction in HBP surgery

As an oncological surgeon-scientist, I was trained in Cancer Biology for studying pancreatic cancer and translational medicine. Based on more than 15 years of clinical experience in treating HBP cancer patients, now I am developing molecular diagnostics which is clinically usable to identify distinct prognostic and predictive subgroups to particular treatment within the identical clinical stage. The overarching goal of my research is to identify potential diagnostic and therapeutic targets and to develop clinical relevant prognostic or predictive markers as well as valid targets for novel therapeutics. To this end, I have been collaborating with a number of researchers in diverse discipline: cell biology, molecular biology, pathology and engineering etc. Based on these platforms, I orchestrate novel cancer therapeutics development specially for therapy refractory pancreatic cancers.
