

<EVAR Simulation Session>

Let's join The Morikage-Juku (Prof. Morikage's special seminar)!!

In the Hybrid Room at the Medtronic Innovation Center, you will experience a model that is very close to a human artery with a pulsatile pump system, under X-ray fluoroscopy. Using this model, Prof. Morikage will demonstrate how to implant an Endurant, particularly the "Reverse Slider Technique," a challenging neck case, and discuss the results with you. Please join us as you learn practical techniques that you can immediately feed back to your clinical practice!
